### About

I'm an experienced Flutter developer, proficient in **Dart** language, **Android**, and **iOS** platforms. Highly skilled in widget-based programming, **state management**, and delivering high-quality solutions. I'm also able to manage projects **solo** as well as **collaborate with teams** to achieve great **Productivity**. I'm committed to staying updated with industry practices, ensuring exceptional user experiences and optimized application **performance**.  
I am dedicated to writing clean, elegant code and continuously staying updated with the latest advancements in the Flutter ecosystem. My attention to detail and creative problem-solving skills ensure that the solutions I develop consistently surpass client expectations. Whether it's optimizing performance, refining UI/UX, or implementing complex features, I aim to deliver exceptional results in every project I undertake.

### Professional Experience

#### Fusionwave

August 2023 – present | Lahore, Pakistan

##### Flutter Developer

As a Flutter Developer at FusionWave, I create top-notch mobile apps for **Android**, **iOS**, and **web** platforms, ensuring high-quality solutions and exceptional user experiences with core expertise.

##### Key Responsibility

- Deliver High-quality apps that meet industry standards.
- Collaborate with cross-functional teams to define, design, and ship new features.
- Work on bug fixing and improving application performance.
- Work on maintaining code quality and organization.
- Work on improving application performance.
- Deploy applications to the Google Play Store and Apple App Store.

#### TechSwivel

June 2023 – July 2023

##### Flutter dev Intern

As a Flutter Intern, I have learned about the widget system and architecture of Flutter, and I have gained proficiency in improving user interfaces.

### Skills

#### Flutter Framework

Dart Programming

#### Agile

Jira, Trello, Click Up

#### Backend Integration

Firebase, APIs

#### Deployment

App Store, Play Store, Web Hosting

#### Cross-Platform

Android, iOS, Web app platforms

#### State Management

Block, Change Notifier (Provider)

#### Team Collaboration

Slack, GitHub / Bitbucket

#### Project Management

Project Handling, Task prioritization, Time management

#### UX/UI design

### Interests

**Node/Express** – I also have interest in server side and also have created some basic CRUD operations with TypeScript

### Education

#### BS(Information Technology)

2019 – 2023

University of the Punjab

### Certificates

Foundation Project Management

## Projects

### Ryddel

August 2023 – December 2023

@fusionwave

I developed the **Ryddel** mobile app for **Android and iOS**, along with a **web-based Admin panel**, facilitating collaborative decision-making through social logins and custom questions. The app helps users enhance their decision-making skills by **prioritizing** their opinions and ranking them.

As the solo project handler, I was responsible for managing the entire project, from designing and implementing the User Interface using Dart and Flutter to developing the schema and business logic with Bloc and Firebase. Additionally, I handled the deployment of the mobile app on both the App Store and Play Store and hosted the Admin panel on Firebase.

### me3Mari

January 2024 – February 2024

@fusionwave

The app is designed for the **construction** industry in **Saudi Arabia**, serving as a central collaboration hub for **homeowners**, design offices, **contractors**, and **material suppliers**.

For version 2, As a team member. I worked on feature enhancements, adding chat functionality and proposal management, while also performing code fixes and overall improvements. I was also responsible for deploying version 2 and providing ongoing support for the app.

### Planet maters,

July 2024 – August 2024

@Fusionwave

The application makes **environmental cleanup** fun, rewarding, and impactful by **encouraging** users to contribute to a cleaner planet while **earning** gift cards and exclusive offers from partners, fostering a deeper love and devotion to nature.

As a team collaborator, I was responsible for managing the app, creating user interfaces for key features like authentication, profile management, and the invite & earn system. Additionally, I managed the app's schema and integrated it with various modules to ensure smooth functionality.

### myTerrace

December 2023 – present

@Fusionwave

The application integrates six different platforms **job hunting**, **service providing**, **event handling**, **marketplace**, **freelancing**, and **product rentals** into a single solution, allowing users to access all these services from one platform.

As the project lead, I managed both the project and the team, while also handling client-facing tasks and reporting. I was responsible for creating a user-friendly interface using Flutter, integrating APIs, and implementing state management with Cubit. Additionally, I integrated third-party libraries, including Stripe for payment processing.

### Instructr

August 2024 – September 2024

@Fusionwave

The app facilitates communication between **learners and driving instructors**, allowing for smooth scheduling of lessons, managing availability, and tracking progress for UK-specific regions.

As the sole project handler, I managed the entire app development process, from designing the user interface to implementing key features such as availability management and progress tracking. Additionally, I handled API integration, database management, and ensured the app's smooth functionality and deployment.
